Integrated Therapy Model

What Is Integrated Therapy?
- Individual educational plan (IEP) goals are developed through a problem-solving approach.
- IEP-based instruction/therapy is provided during regular classroom activities, routines, and transitions through support, consultation, and modeling with teaching staff.

Why Should We Use an Integrated Therapy Model?
An Integrated Therapy model:
- Helps assure IEP goals are integrated into classroom instruction and routines.
- Promotes collaboration between therapists and teaching staff.
- Helps children generalize behaviors in the classroom and at home.
- Enhances learning opportunities in transitioning from one setting to the other (e.g., from classroom to playground).
- Allows regular coaching and mentoring opportunities.
- Provides additional opportunities to exchange information between therapists and teachers.
- Helps in understanding respective roles and expands knowledge base.

Where Do Therapists Work with Children?
- In classrooms
- During lunch time
- On the playground
- Walking to the bus
- On field trips

What Do Therapists Do with Children in the Classroom?
- Work with children on IEP goals within the context of activities and routines
- Introduce and implement interventions
- Collaborate with classroom staff during instruction
- Model practices and strategies for implementation in the classroom
- Provide training/consultation to classroom staff
- Provide feedback to classroom staff
- Monitor (measure) child progress
## What Are the Roles of the Team Members During Integrated Therapy?

<table>
<thead>
